An Overview

This report presents result of Industrial Production Survey for the years 2017 and 2018. The information presented in this report is in quantity and value of the products for the selected commodities in the manufacturing industry. The data presented refers to the quantity produced for the selected commodities and the indices in the manufacturing industry. This report is provisional and where necessary the revised figures would be included in the next report.

Objective

The primary objective of the Quarterly Survey of Industrial Production is to provide timely information on short – term developments of the industrial sector in Zanzibar. The information will be useful to planners, decision makers and all other parties interested in studying the country's industrial sector.

Scope and Coverage

The QSIP survey is limited to manufacturing industries and covers almost all manufacturing establishments with large share in this sector (selected commodities). According to 2012 Industrial census results, it contributes more than 85 percent of the total manufacturing gross output; consequently the realized output may be used as a reliable estimate for the industrial sector.

The small scale establishments with substantial output were also included. They were less than 10 percent of the total number of establishment covered.

Methodology

This QSIP report is limited to quarterly surveys of ‘selected commodities’ industrial products. As such, and to the nature of manufacturing activities in Zanzibar its scope is highly limited to only few products.

Compilation of indices of manufacturing industry requires not only the specifications of the products but also details of relative volumes and their relative weights (of the current and base periods) as well as the compilation procedures for the ISIC classes, groups and divisions of commodities. For the purpose of this report, these indices have not been directly compiled (using spreadsheets) but derived from limited information of volumes and values of selected commodities.

The different volume measures of these products (e.g. pieces, tons, liters, cubic meters...) have narrowed the compilation process, mainly to group indices. Additionally, irregular production patterns (some commodities missing for the whole reference period) poses distortions to the compiled indices.

The index estimation procedure has used the quarterly commodity quantities observed in the Survey of Selected Commodities for the first quarter (January – March), 2016 as its base period. The generalized Laspeyre’s volume index formula has been employed in the derivation process. The index formula for time **0** and time **t** (**I_{0,t}**) is in the form:

$$I_{0,t} = \frac{\sum \frac{Q_t}{Q_0} * W_0}{\sum W_0} * 100$$

Where,

Q_t = current period quantity output

Q₀ = base period quantity output

W₀ = the weight, that is the importance of the product in the universe in the base year.

The classification used in this report follows Revision 4 of the International Standard Industrial Classification (ISIC) of all economic activities. ISIC codes have been classified as Class (four-digit level), Group (three-digit level) and Division (two-digit level).

Results

The overall index for the first Quarter (January – March 2018) stands at 123.2 marking an increase of 29.4 percent in commodity production volumes compared with 93.8 observed in Q4 2017. The increase in the index has been attributed mainly by increases in manufacture of food commodities (mainly sugar Production), bakery products, Grain mill Products and articles of ostentation (gold and silver).

Indices at Division level (Table 4) suggest irregular patterns following distortions in production of several commodities (i.e. there is no production of plastic product). The food class that dominates the manufacturing industry shares 90 percent in value at the base period; Resumption in production of sugar has greatly improved the index of food manufacturing and a consequent increase in the manufacturing index.

Indices at the Group level (Table 5) are the same as those of the division level, for the same group products have formed the divisions. The increase in the production of sugar in the first Quarter of the year 2018 leads to boost up the indices in manufacture of other food products up to 193.7 from 126.6 in the fourth quarter of the year 2017 which marked an increase of 67.1 percent. Effort need to be paid to increase commodity items for the construction of a better index of manufacturing commodities.

Commodities at the Class level (Table 6) are similar to those at the Group level, except for food group which also incorporates bakery products (bread); the index in manufacture of sugar is extremely increased by 40.4 percent from the fourth quarter of the year 2017 to the first quarter of the year 2018, the combined group index of manufacture of other food products declined by 1.3 percent from the fourth quarter of the year 2017 to the first quarter of the year 2018.

REPORT OF

(A) EMPLOYMENT REMUNERATION AND NUMBER OF WORKING DAYS

Description (Operatives)			Other Employees		Total Person engaged		Number of Days During with Operatives Workers for (Shift)			Total Number of working day col. (8+9+10)
Month	Number	Wages	Number	Salaries	Number	Wages & Salaries	One	Two	Three	
(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)	(9)	(10)	
Total										

Note:

- * Number of Employees should be as at the last working day of month according the Pay*roll.
- * Wages and Salaries (Col. 3 and 5) required should be Gross Salaries.

(B) PRODUCTION AND SALES**MSIP**

Month	Product/By – Product..... Unit: (Kg, Tons, Meter, No, etc)				Product/By Product..... Unit: (Kg, Tons, Meter, No, etc)				Product/By – Product..... Unit: (Kg, Tons, Meter, No, etc)			
	Production		Sales		Production		Sales		Production		Sales	
	Qty	Value	Qty	Value	Qty	Value	Qty	Value	Qty	Value	Qty	Value
Total												
Month	Product/By – Product..... Unit: (Kg, Tons, Meter, No, etc)				Product/By –Product..... Unit: (Kg, Tons, Meter, No, etc)				Product/By – Product..... Unit: (Kg, Tons, Meter, No, etc)			
	Production		Sales		Production		Sales		Production		Sales	
	Qty	Value	Qty	Value	Qty	Value	Qty	Value	Qty	Value	Qty	Value
Total												

Note:

- Value of the Output should be excluding Sales Taxes
- Value of Sale should exclude Indirect taxes
- Sales should only include Product Manufacture by the establishment

(C) EXPENSES**MSIP**

Provide below, in value terms, the expenditures incurred for purchases of the following:

	Details of Expenditure	Amount (T.Shs)
1	Purchase of Goods and Services for Resale in the same condition	
2	Materials & Fuel Purchased	
3	Electricity & Water bills paid	
4	Taxes on Products paid. (E.g. sales tax, excise tax, etc.)	
5	Value Added Tax (VAT)	
6	ZSSF Contribution.	
7	Interest Paid	
8	Rent Paid (on rented housing, rented machinery and equipment, etc.,)	
9	Transport Charges	
10	Other Miscellaneous Expenses	
11	Total Expenses	

DECLARATION:

I declare that to the best of my knowledge the information provided is true and correct.
