Note:

The maps used in this publication are based on the cartographic work; thus, it is for statistical use only.

POPULATION DISTRIBUTION BY ADMINISTRATIVE BOUNDARIES; TANZANIA ZANZIBAR; 2022 PHC

Foreword

The 2022 Population and Housing Census (PHC) for the United Republic of Tanzania had its reference as the midnight of the 22nd/23rd August 2022. This was the Sixth and the first digital Census after the Union of Tanganyika and Zanzibar in 1964. Other

post union censuses were carried out in 1967, 1978, 1988, 2002 and 2012. The Sixth Phase Government of Tanzania under the leadership of Her Excellence Dr. Samia Suluhu Hassan, and the Eighth Phase Government of Zanzibar under the leadership of Dr. Hussein Ali Mwinyi like the previous phases, have fulfilled their obligation of conducting the 2022 PHC according to the United Nations Principles and Recommendation for the Population and Housing Census. We owe them much appreciation for their commitment and support during Census implementation.

The 2022 PHC was conducted in accordance with the Statistics Act Cap 351, which mandates the Government of the United Republic of Tanzania to conduct Population and Housing Census every ten years. It also followed the United Nations guidelines for countries to adapt use of more advanced technology at all stages of Census implementation. Indeed, the country's decision to use more advanced technology to capture data during cartographic work; enumeration and data transmission; and processing made the 2022 PHC the first ever digital census to be conducted in Tanzania.

The 2022 PHC results are for integrated plans and sustainable development of the country and will help to increase awareness and transparency in allocation of resources at all levels of administration based on the actual population. The Census results will be used by the Government and stakeholders in monitoring and evaluating various national, regional and international development frameworks including the Tanzania Development Vision 2025 and Zanzibar Development Vision 2050; the Third National Five-Year Development Plan 2021/22 - 2025/26 and Zanzibar Development Plan 2021/22 - 2025/26; the East African Community Vision 2050; Southern African Development Community Vision 2050 and the African Development Agenda 2063. Census results will enable the country to evaluate the progress of implementation of Sustainable Development Goals; goals that aim at achieving equality and eradicating poverty of all kinds including extreme poverty by 2030 by ensuring

no one is left behind. The census data will also provide a basis for the computation of several indicators such as enrolment and literacy rates, infant and maternal mortality rates, unemployment rate and others.

The Age and Sex Distribution Report – Tanzania Zanzibar (Volume 2C) and Volume 2B for Tanzania Mainland are the subset of the Age and Sex Distribution Report (Volume 2A) which is the second in a series of planned publications for the 2022 PHC; the first report was the Administrative Units Population Distribution Report divided into Volume 1A for the United Republic of Tanzania, Volume 1B for Tanzania Mainland and Volume 1C for Tanzania Zanzibar. The main purpose of this report is to give aggregated total population by age and sex of Tanzania Mainland disaggregated by Region and Council levels for informed decision making. Other reports in the series of planned Census publications will present among others Basic Demographic and Socio-Economic Characteristics of the population at National, Regional and Council levels.

The success of the 2022 PHC depended on the cooperation and contributions from the Government, specifically Census Committees from national to the lowest administrative level. These include the National Central Census Committee which comprised of sectorial Ministers; National Census Advisory Committee which comprised of Sectorial Permanent/Principal Secretaries; National Census Technical Committee; Census Committees at Regional, District, Wards/Shehia, Village/Mtaa and Hamlet. Forums from Non-States Actors including Collaborators Forum, Private Sector, various institutions and the public at large.

A special word of thanks goes to Government leaders at all levels, particularly, Prime Minister's Office - Policy, Parliamentary Affairs and Coordination; Office of Second Vice President of Zanzibar; Minister for Finance and Planning; Minister of State - President's Office, Finance and Planning, Zanzibar; Members of Parliament; Members of the House of Representatives; Councillors/Shehas; Regional and District Census Committees chaired by Regional and District Commissioners of respective area; Census Coordinators (National and Zanzibar); Regional and District Census Coordinators; Supervisors; Enumerators; Local leaders and all respondents (head of household, members of households and individuals).

Special gratitude is extended to the following Development Partners:- United Nations Population Fund (UNFPA); World Bank (WB); United Nations Children's Fund (UNICEF); UN-Women; International Organization for Migration (IOM); United States Agency for International Development (USAID); Foreign, Commonwealth and Development Office (FCDO); United States Census Bureau (USCB), The Republic of South Korea, The People's Republic of China and other Development Partners for providing equipment, expertise, training and financial support in making the 2022 Population and Housing Census a success. We also thank religious, traditional and political leaders, non-governmental organization leaders, the media and all citizens and non-citizen in general for their participation and contributions in the successful implementation of the Census.

Special thanks should go to the Honourable Anne Semamba Makinda - Census Commissar for Tanzania Mainland and Former Speaker of the National Assembly; and Honourable Ambassador Mohamed Haji Hamza - Census Commissar for Tanzania Zanzibar, for their effective leadership and management in educating and sensitizing all citizens and non-citizens to participate in the 2022 Population and Housing Census thus, resulting in enhanced quality, smoothness and timely execution of the Census exercise. We also thank the Chairperson of the Governing Board of the National Bureau of Statistics (NBS), Dr. Amina Msengwa and the Chairperson of the Statistics Board of Zanzibar, Ambassador Amina Salum Ali, for their guidance throughout the implementation of the Census exercise.

Last but not least, we would wish to acknowledge the unprecedented efforts and commitment of the management and staff of the National Bureau of Statistics under the leadership of Dr. Albina Chuwa, the Statistician General; and staff of the Office of the Chief Government Statistician, Zanzibar under the leadership of Mr. Salum Kassim Ali; Chief Government Statistician; staff from the Ministry of Lands, Housing and Human Settlements Development; Ministry of Information, Communications and Information Technology; as well as other Government officials who worked tirelessly in ensuring that the 2022 Population and Housing Census was implemented successfully.

Kassim Majaliwa Majaliwa (MP)
Prime Minister of
The United Republic of Tanzania

Hemed Suleiman Abdulla (MHR)
Second Vice President of Zanzibar

Acknowledgement

The National Bureau of Statistics and Office of the Chief Government Statistician, Zanzibar conducted the 2022 PHC to provide necessary information for policy formulation, planning,

monitoring and evaluation of development processes. The Census collected detailed

information on demographics, disabilities, migration, possession of National documents and

orphanhood, education, economic activities, land ownership and information related to ICT

ownership and use, fertility, mortality, housing ownership and assets, agriculture,

community facilities and buildings. Some information on physical addresses was also

collected.

This report presents population distribution disaggregated by age and sex from regional

level to council level. It provides detailed statistics of different indicators that facilitate

making evidence-based decisions relevant to the population at their localities. We therefore

express our sincere appreciation to all experts who have put their time and efforts to

produce this report. In particular we would like to thank Ruth Davison Minja, Acting Director

of Census and Demographic Statistics; Fahima Mohamed Issa, Director of Social Statistics

Department, OCGS; Seif Ahmad Kuchengo, the National Census Coordinator; Abdul-majid

Jecha Ramadhan, Tanzania Zanzibar Census Coordinator and the National Census

Technical Team, Statisticians, Demographers, Information Technology Experts and

Geographic information System officers for their commitment which led to successful

completion of this report.

Our appreciation is as well extended to all the professionals, Regional and District

supervisors, enumerators and field supervisors as well as the media for their dedicated

work. Certainly, without their commitment and dedication, the census would not have been

successful. We would also like to thank the public for their cooperation during the entire

period of the Census.

Dr. Álbina Chuwa Statistician General

National Bureau of Statistics

Salum Kassim Ali
Chief Government Statistician
Office of the Chief Government
Statistician, Zanzibar

Organization of the Report

The Age and Sex Distribution Report presents aggregated total population for Tanzania Zanzibar by age (in single year and five-year age group), sex and rural urban dimensions. In the same focus, results are presented at Regional and Council levels.

Section One gives an overview of the 2022 PHC, providing a brief history of Census undertaking in Tanzania, its objectives, Census preparations and quality assurance procedures at all phases of Census implementation from pre- enumeration, during enumeration and post-enumeration activities.

Section Two provides evaluation of the quality of age and sex data. In this Section, the quality of age data is evaluated using three dimensions, namely, line graphs, population pyramids and indices of digit preference.

Section Three presents result highlights on the population distribution by age and sex. Summary results are presented on age and sex structure by major population age groups such as population under 15 years of age, population aged 15-24 years, population aged 15-64 years and elderly population (age 65 or above). Result highlights are presented for Tanzania Zanzibar and regional levels. A brief descriptive analysis of the information is also presented.

Section Four gives population distribution statistical tables by age (in single and five – year age groups) and sex at Tanzania Zanzibar, Regional, and Council levels.

Summary Results by Specific Age Groups, Sex and Place of Table 1: Residence; Tanzania Zanzibar; 2022 PHC

	Total	Rural	Urban

UN - United Nations

Basic Concepts and Definitions

Age is the number of years one had lived as of his/her last birthday i.e. in reference to the census night.

Age-Dependency Ratio is the ratio of people in the "dependent" ages (those under age 15 and age 65 or above) to the "working age population" (age 15-64 years).

Census Night is the reference night of the census. According to the Tanzania 2022 Population and Housing Census, the census night was the midnight of 22nd/23rd August 2022.

Collective Households: For census purpose, a collective household is a group of persons residing in one dwelling or compound having no head of household. Boarding schools, hospitals and camps are examples of collective households.

Elderly Population: According to the international definition, an elderly is a person aged 65 years or above. However, according to the Tanzania National Ageing Policy, an elderly is a person aged 60 years or above.

Enumeration Area (EA): An EA can be defined as the smallest spatial unit usually used by an enumerator during census enumeration. For the purpose of the 2022 PHC, an EA was a designated area with an average of 60 to 100 households.

De facto census is the method of enumeration of individuals as of where they are found during the census night, regardless of where they normally reside.

Geographical Information System (GIS) is a system designed to capture, store, manipulate, analyse, manage and present all types of geographical data.

A Household refers to a person or group of persons who reside in the same homestead or compound, but not necessarily in the same dwelling unit, having same cooking arrangements and are answerable to the same household head.

Median Age is the age at which exactly half the population is older and the other half is younger.

Myers' Index is calculated for the age above 10 years and shows the excess or deficit of people in ages in any of the ten digits (digits "0" to "9") expressed as percentage. It is based

on the assumption that; the population is equally distributed among all ages. The theoretical range of Myers` Index is from 0 to 90, where "0" indicates no preference, while "90" indicates absolute preference.

Population Pyramid graphically displays population's age and sex composition. Horizontal bars present numbers or percentages of males and females in each age group.

Private (conventional) Household: For census purposes, a private household is a household comprising head of household and other member(s) of household. It can also be a household of one person.

Quality Assurance includes planned and systematic activities implemented in a quality system so that, quality requirements for the product will be fulfilled.

Quality Control includes observation techniques and activities used to fulfil requirements for quality.

Sex Ratio is the ratio of males to females in a given population usually expressed as the number of males for every 100 females. For example, a sex ratio of 98 for Katavi Region means, for every 100 females, there are 98 males.

Sex Ratio under one year of age is the ratio of males to females under one year of age in a given population usually expressed as the number of males for every 100 females.

Urban Area: Countries differ in their definitions of urban, although it is fairly common for the urban population to consist of those living in towns and cities of a few thousand persons or more especially if the population of such areas is largely non-agricultural. For the purpose of the 2022 PHC that was conducted in the country, an urban area is an area that is legally recognized (gazetted) as urban and all areas recognized by Local Government Authorities as urban.

Working Age Population is the population aged 15 - 64 years.

Young Population is the population aged 0 - 14 years.

Youth Population: Internationally, Youth Population is the population aged 15-24 years. However, according to the Tanzania's Youth Policy of 2007, Youth Population is the population aged 15 - 35 years.

Section One

An Overview of the 2022 Population and Housing Census

1.0 Introduction

The United Nations defines a population census as the total process of collecting, compiling, evaluating, analyzing, publishing and disseminating demographic, economic and social data pertaining, at a specified time, to all persons in a country or in a well delineated part of a country.

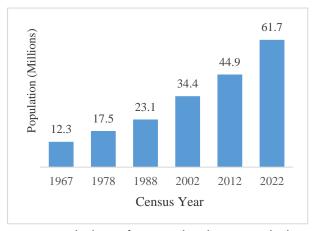

In other words, a population census is the complete count of all persons in a country at a given time. It is the primary source of detailed data on the size, distribution and composition of population. It covers all population groups such as private households, institutions, homeless and migrants for all geographic and/or administrative units in the country. Therefore, data from population censuses allow analysis and presentation of statistics for persons, households and various population groups for a wide variety of geographical units.

The United Nations recommends that countries should conduct at least one population census every 10 years. The UN further recommends that the census of buildings could be carried out concurrently with, or subsequent to, the population and housing census, or it may provide for the identification of special types of buildings significant for other enquiries, such as the census of establishments or the census of schools. In that light, the Government of the United Republic of Tanzania decided to conduct the Census of Buildings and the National Physical Addressing Census in parallel with the 2022 Population and Housing Census with the aim of increasing efficiency and reducing costs.

The 2022 PHC is the first digital census in Tanzania, whereby mobile technology was used in data capture and transmission, census geography and enumeration. Technically, the mobile devices (tablets) were programmed with a data capture system developed using CSEntry (a CSPro tool for data capture) that runs on Android Operating System. Programming of these devices were done by local experts.

1.1 A Brief History of Census Undertaking in Tanzania

The history of population counts in Tanzania dates back to 1910. The first modern census was conducted in 1958. After the union of Tanganyika and Zanzibar in 1964, other censuses were conducted in 1967, 1978, 1988, 2002 and 2012. Since 1967, the country has conducted decennial Population and Housing Censuses on a *de facto* basis in accordance

with the United Nations (UN) Principles and Recommendations for conducting population and housing censuses.

Data collected in these censuses show that the Tanzania's population has increased about five times since 1967 from 12,313,469 persons in 1967 to 61,741,120 persons in 2022. The 2022 PHC enumerated 61.7 million persons representing an average annual intercensal population growth rate of 3.2 percent during the 2012 – 2022 period compared to 2.7 percent recorded in the 2002-2012 period.

1.2 Objectives of the 2022 Population and Housing Census

The main objective of conducting the 2022 PHC was to provide the Government with information on the size, distribution, composition and other social economic characteristics of the population as well as information on housing conditions. This information will contribute to the improvement of quality of life for Tanzanians through provision of current and reliable data for policy formulation, development planning, evidence based decision making and service delivery as well as for monitoring and evaluating population and socio-economic programmes in the country.

Specific objectives of the 2022 PHC were to:

- a) Increase availability and accessibility of accurate, timely and reliable data on demographic, socio-economic characteristics and environment;
- Enhance knowledge of stakeholders on socio-economic, demographic characteristics and environment of the Tanzanian population as well as patterns and trends of population growth;
- c) Increase utilization of socio-economic, demographic and environment data disaggregated to lower administrative levels;

- d) Strengthen capacity of NBS and OCGS in carrying out population and housing censuses, in areas of planning, collecting, processing, analysing, disseminating, utilizing and archiving population and housing census and other statistical data; and
- e) Establish a comprehensive buildings and National Physical Addresses database to facilitate making evidence based decisions towards improving provision of social services, expansion of tax base and to inform development programmes in general

Section Two

Evaluation of Quality and Analysis of Age and Sex Data

2.0 Introduction

In demographic analysis, age and sex characteristics of the population are very important particularly in relation to socio-economic development planning for a country. This is due to the fact that the planning process requires specific data for different population groups. For instance, males and females as well as population of different age groups have different needs. To be able to plan and make correct decisions for these groups, data of specific age groups are crucial.

Evaluation of quality and analysis of age and sex data is important in ensuring that the planned aspects for different population groups are adequate to cater for each population group. In most cases misreporting of population sex is negligible, except in cases of incompleteness in the coverage of the two sexes during enumeration. In developed countries it is usually under one percent.

Age is the most important variable in the study of population dynamics and other aspects of demographic analysis. It is used in planning and making important decisions in public administration for different population groups. For instance, age is used in provision of health care services, food and shelter, labour force participation, school enrolment, registration of voters and in making population forecasts. However, despite its importance, age is routinely misreported particularly in developing countries' censuses and surveys.

Age misreporting results from a variety of circumstances, ranging from ignorance of the true age to digit preference; or avoidance of reporting ages ending with certain digits to deliberate age misstatements. Whatever the case, age misreporting distorts the true values of population indicators. For instance, frequent misreporting of age among adult women and the selective omission of male or female children are known to distort childhood mortality patterns, sometimes severely. Age misreporting may also distort the actual number of children that are expected to be enrolled in schools in a certain year or the number of women in the reproductive age that are expected to receive reproductive health care services.

Basing on experience gained from the previous censuses, age data are characterised by a significant clustering at ages ending in digits "0" "5" and "8" and to a lesser extent to ages ending with even numbers, with corresponding deficiencies at ages ending in digits "1", "3",

"7" or "9". The tendency of respondents to report ages ending with certain digits at the expense of other digits is called age heaping, age preference or digit preference. Age heaping is most pronounced among populations or population sub-groups with no birth registration system or low literacy rates.

The fact that, age in census are frequently misreported makes it necessary to evaluate its quality before using it for planning and making decisions. The quality of age data can be evaluated using age and sex ratios. Summary measures such as Whipple's and Myers' indices are normally used to evaluate the overall quality of age reporting and sources of errors. However, presentation of the data in broad population age groups (5-year or 10-year age groups) can be used to minimize errors in the age data.

The Tanzania 2022 PHC collected data on age in completed years of all persons who spent the census night in Tanzania. The data, like those collected in previous censuses conducted in the country and those collected in most developing countries, are affected by deficiencies in age and sex reporting.

In this Section, an attempt is made to highlight general errors in age and sex reporting in the 2022 census data. A more in-depth analysis and presentation of this phenomenon will be undertaken in the forthcoming analytical reports.

2.1 Evidence of Age and Sex Misreporting

In this section, evaluation of quality of age and sex data is examined using three approaches:

- a) Line graphs;
- b) Population pyramids; and
- c) Indices of digit preference.

2.1.1 Line Graphs Approach

Figures 2.1 present the distribution of the population enumerated in Tanzania Zanzibar during the 2022 PHC in single years and sex. Evidence of age misreporting is apparent in both cases. The results depict a tendency of heaping on ages ending in certain digits, and the consequent avoidance of others. Significant heaping is observed in ages ending with digits "0", "2" and "8", and avoidance of ages ending with digits "1", "3", and "9". There is clear indication that, age misreporting for digit 5 is insignificant. This might be caused by improved data collection techniques especially use of tablets and improved probing of age

data and the use of National and Zanzibar Identification Cards during enumeration. The observed jagged edged pattern is a typical feature of single-year age distributions in most developing countries' census data depicting age misstatements. Digit preference is observed to be relatively higher among females than males.

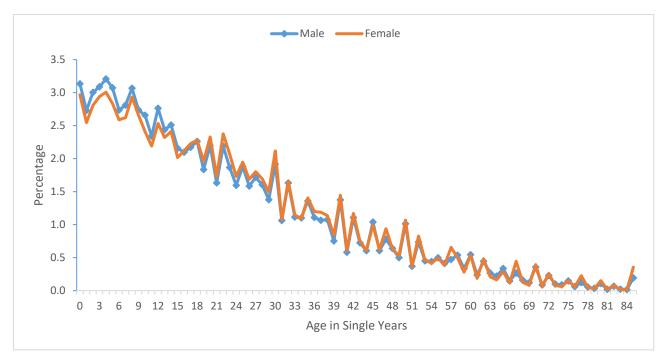

Figure 2. 1: Population Distribution by Age in Single Years and Sex, Tanzania Zanzibar; 2022 PHC

Note: Regardless of the prevailing age misreporting patterns, the results indicate that, age misreporting is low, which cannot affect the quality and use of 2022 PHC data.

2.1.2 Population Pyramids (in Single Years) Approach

Population pyramid provides a snapshot of the relative age distribution of a population by sex, and it can be presented in single year or using age groups. In addition, a population pyramid can highlight inconsistencies in age reporting, particularly in single years. Where age reporting is accurate and migration is limited, the traditional population pyramid in five-year age groups can provide useful insights into the patterns of vital events (birth and death rates) in the past. In a typical population, the relative percentage composition should decrease progressively with increasing age.

Figures 2.2 show population pyramids in single years for Tanzania Zanzibar based on 2022 PHC data. The figures portray evidence of age misreporting, and a significant preference for ages ending in digits "0" and "5" and, to a lesser extent, even numbered digits. Apparently, age misreporting is more pronounced for persons above 15 years of age.

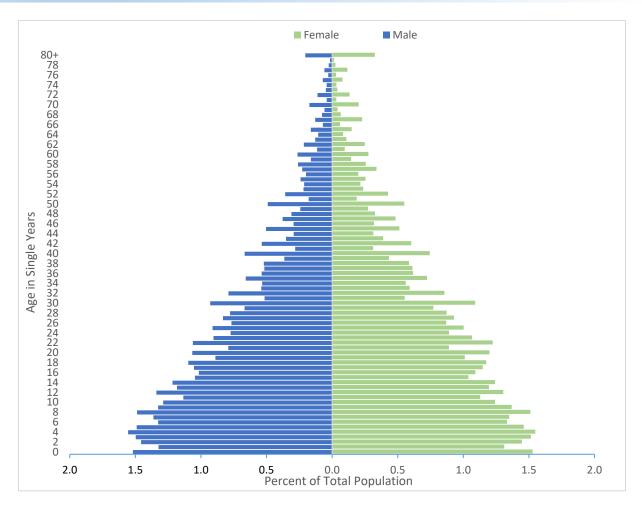

Figure 2. 2: Population Pyramid in Single Years – Tanzania Zanzibar; 2022 PHC

Note: The last age category (80+) in figures 2.3 and 2.4 represents accumulation of population aged 80 and above thus its percentage share is higher than immediate lower ages contrary to normal African population structures.

2.1.3 Indices of Digit Preference Approach

Various statistical methods have been developed to measure heaping on individual ages or terminal digits. These methods generally assume that individual ages are evenly distributed (rectangular or linearly) over specific age groups and by extension, on the entire age spectrum. Ultimately, the methods adapted would depend on the assumption regarding the form of the true age distribution of the population over a part or on the entire age range.

Whipple's and Myers' blended indices are mainly used to measure the extent of age misreporting in populations. The Whipple's index measures preference or heaping on ages ending with digits "0" and "5". On the other hand, Myers' blended method avoids biases associated with the Whipple's index that may occur upon the population age structure or distribution for reasons other than heaping or preference (i.e. ages ending with digit "0"

would normally be larger than ages ending with digit "1" to "9") owing to natural attrition (mortality) (Siegel and Swanson 2004). Myers' blended index entails determining the proportion that the population ending in a given digit ("0" through "9") is of the total population, by varying the particular starting age for any 10-year age group.

Other summary indices of digit preference include Bachi index, Carrier index, and Ramachandran index. While these have some theoretical advantages over Whipple's and Myers' indices, they differ little as indicators of the general extent of age heaping (Siegel & Swanson, 2004). In this respect, these indices together with the Whipple's index will not be used in evaluating the 2022 PHC age data.

The US Census Bureau, (1994) developed a program known as Population Analysis Spreadsheets (PAS) which include a SINGAGE spreadsheet that calculates Myers', Whipple's and Bachi's indices. The spreadsheet has been applied to generate the Myers' index that is used to evaluate the 2022 PHC age data.

Table 2.1 presents the calculated Myers' index of digit preference to evaluate the 2022 PHC age data for Tanzania Zanzibar. The table indicates noticeable preference for digits "0", "2", and "5" and the avoidance of digits "1", "4", and "9" for Tanzania Zanzibar. While avoidance of digits "4" and "6" was noted in Tanzania Zanzibar,.

Myers' Index measures preference for each of the ten possible digits when reporting persons' age. The index is based on the principle that in the absence of age heaping (digital preference when reporting persons' age), the aggregate population of each age ending in one of the digits 0 to 9 should represent 10 percent of the total population with effects of mortality considered (Siegel & Swanson, 2004). The theoretical Myers' index ranges from 0 (representing no age heaping) to 90 (representing the entire population reported ages ending in the same digit).

Analysis of the 2022 Census results indicate that, the overall digital preference on the basis of Myers' Index was very low at 14.36 for Tanzania Zanzibar. The low values of the index suggest that, age reporting and the overall census data collection was of high quality, and thus such data can be used for other purposes with reasonable confidence.

Overall, digit preference is more predominant among females than males. Generally, data indicate mild to moderate digit preference in age reporting.

Table 2. 1: Myers' Index of Digit Preference; Tanzania Zanzibar, 2022 PHC

Digit	Male	Female	Both Sexes
<u>Index</u> ⁶	13.65	15.00	14.36
0	2.95	3.21	3.09
1	-2.51	-2.76	-2.64
2	2.10	2.25	2.18
3	-0.72	-0.83	-0.77
4	-1.05	-1.42	-1.24
5	1.06	0.55	0.79
6	-0.91	-0.98	-0.95
7	0.40	1.44	0.94
8	0.31	0.06	0.18
9	-1.64	-1.52	-1.58

■ Male ■ Female 4.00 3.00 2.00 1.00 Deviation 0.00 -1.00 -2.00 -3.00 -4.00 6 0 1 2 3 4 5 7 8 9 Digit

Figure 2. 3: Myers' Index Preference; Tanzania Zanzibar, 2022 PHC

2.1.4 Conclusion

Evidence shows strong preference for ages ending in digits "0" "2" and "8", and avoidance of ages ending in digits "1", "3", "4", and "9". Age misreporting is generally higher among males compared with females.

⁶ The sum of the absolute values of the deviations

Section Three

Population Distribution by Age and Sex

3.0 Introduction

This Section highlights the 2022 PHC results by age and sex. The information is critical for the implementation of Tanzania Zanzibar policies and programmes. Moreover, information on age and sex is essential in the analysis of demographic determinants of population change (fertility, mortality and migration). Detailed statistical tables from national to council level, are presented in Section four.

3.1 Age and Sex Structure

Table 3.1 presents the distribution of Tanzania Zanzibar population by 5-year age groups and sex.. The data depict a young population age structure for Tanzania Zanzibar, with 40.8 percent of the population aged below 15 years, and 4.6 percent aged 65 years and above.

The median age of Tanzania Zanzibar population is 19 years. The results also depict a higher number of females than males in almost all age groups, except 10-14.

Table 3. 1: Population Distribution by Five-Year Age Groups and Sex; Tanzania Zanzibar; 2022 PHC

Age Group	Both Sexes	Percent	Male	Percent	Female	Percent
Total	1,889,773	100.0	915,492	100.0	974,281	100.0
0-4	276,739	14.6	138,387	15.1	138,352	14.2
5-9	263,843	14.0	131,629	14.4	132,214	13.6
10-14	231,026	12.2	115,976	12.7	115,050	11.8
15-19	198,894	10.5	96,034	10.5	102,860	10.6

85+	5,217	0.3	1,759	0.2	3,458	0.4

3.1.1 Population Pyramid

Population pyramid provides a snapshot of the population age and sex structure. It also provides useful insights into the patterns of vital events (birth and death rates). The Tanzanian Zanzibar pyramid is characterized by a young age structure, with a large proportion of the total population found in the young and/or youthful ages (about 41 percent of total population are below 15 years and about 36 percent are between 15 and 35 years). This is typical of Sub-Saharan African populations with high and, sometimes, rising fertility regimes in the past (Figures 3.1).

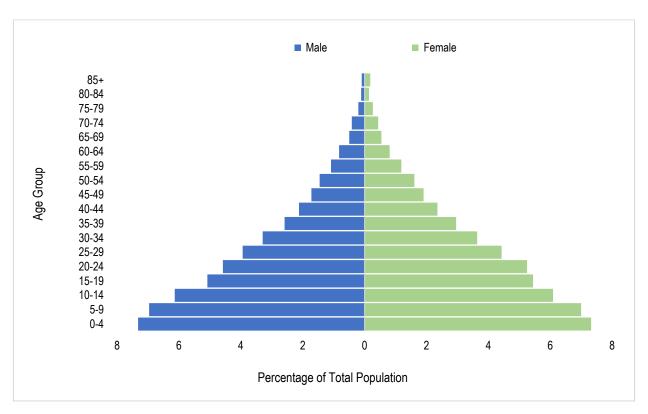

Figure 3. 1: Population Pyramid (Five -Year Age Groups); Tanzania Zanzibar; 2022 PHC

Key Message Box 1:

The broad-based pyramids for Tanzania Zanzibar indicate young population caused by high fertility rates among women of reproductive age and high mortality rates. However, data from previous censuses indicate slow decline fertility rates as compared to mortality rates. For developed countries like Sweden, population pyramids look like a rectangular shape, displaying somewhat equal percentages across age cohorts that taper off toward the top often characterized with low birth and mortality rates and overall high quality of life.

3.2 Population Distribution for Specific Age Groups

3.2.1 Young Population (0 - 14 Years)

Tanzania Zanzibar population is characterized by a young age structure, with 40.8 percent of the total population below 15 years of age. Figure 3.2 shows that the proportion of population below 15 years of age declined from 42.5 percent in 2012 to 40.8 percent in 2022. Among other factors, this moderate decline indicates a slow pace of fertility decline in the country during the period as depicted by the decrease of the population under one year.

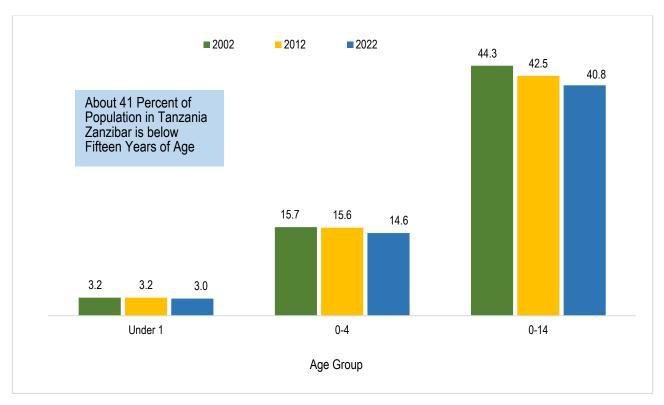

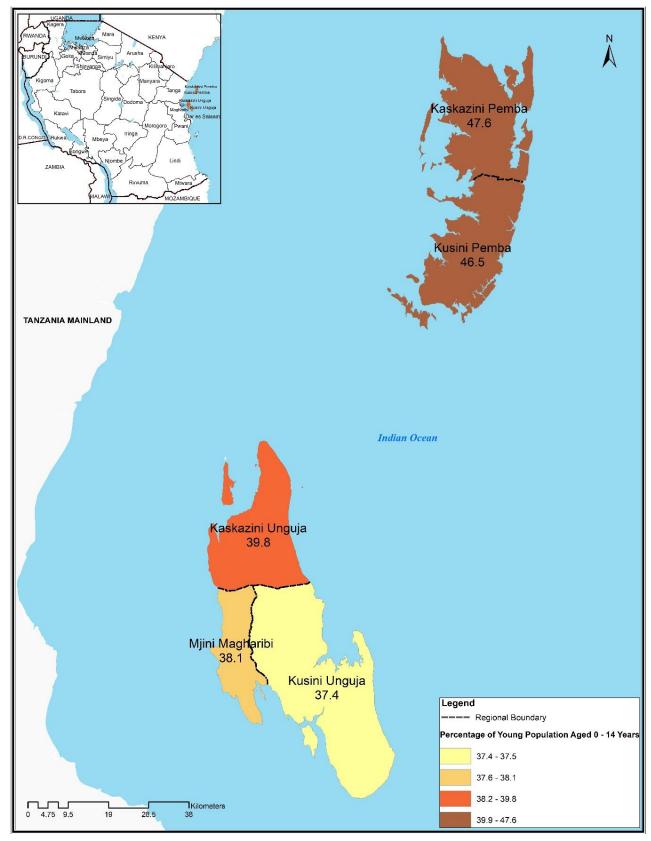

Figure 3. 2: Percentage Distribution of Young Population (0 – 14 years); Tanzania Zanzibar; 2002, 2012 and 2022 PHC

Map 3.1 shows the proportions of young persons (0 -14 years) in the regional populations. Kaskazini Pemba Region recorded the highest proportion of young population (47.6 percent), while Kusini Unguja had the lowest proportion (37.4 percent).

Map 3. 1: Percentage Distribution of Young Population (0 - 14 years) by Region; Tanzania Zanzibar; 2022 PHC

3.2.2 Young Population (0 - 17 Years)

Figure 3.3 shows that the percentage of population below 18 years of age for Tanzania Zanzibar is 47.2 percent. The proportion of population declined from 49.0 percent in 2012 to 47.2 percent in 2022.

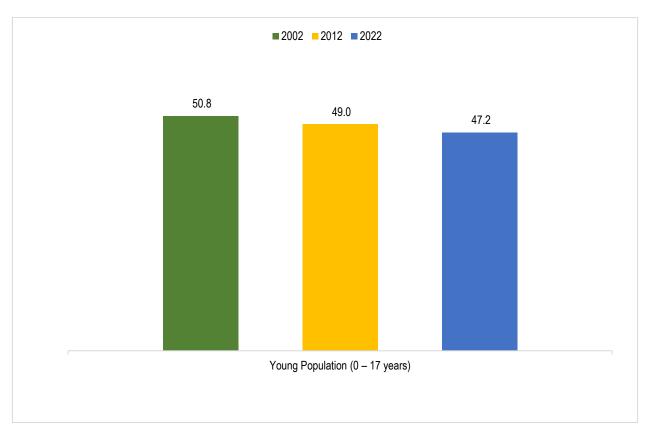

Figure 3. 3: Percentage Distribution of Young Population (0 – 17 years); Tanzania Zanzibar; 2002, 2012 and 2022 PHC

Figure 3.4 shows the proportion of young persons (0 -17 years) in the regional populations. Kaskazini Pemba Region recorded the highest proportion of young population (55.1 percent), while Kusini Unguja had the lowest proportion (42.8 percent).

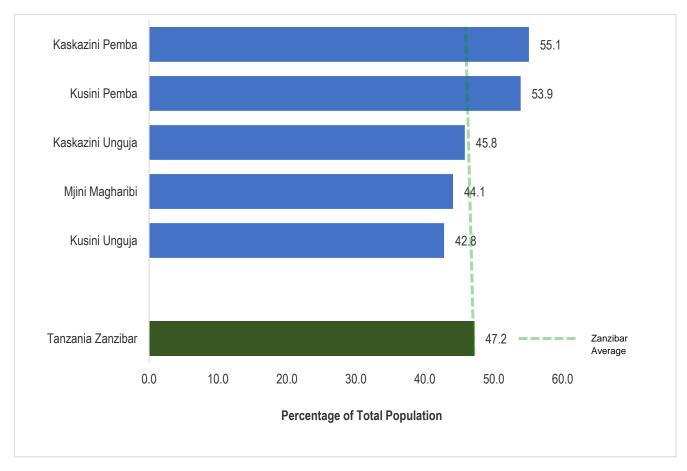

Figure 3. 4: Percentage Distribution of Young Population (0 - 17 years) by Region; 2022 PHC

3.2.3 Youth Population

(a) National Definition of Youth

The National Youth Development Policy of 2007, defines youth as all young men and women aged 15 to 35 years. Consequently, according to the 2022 PHC, the proportion of population aged 15-35 years for Tanzania Zanzibar increased from 36.2 percent in 2012 to 37.0 percent in 2022 (Figure 3.5).has

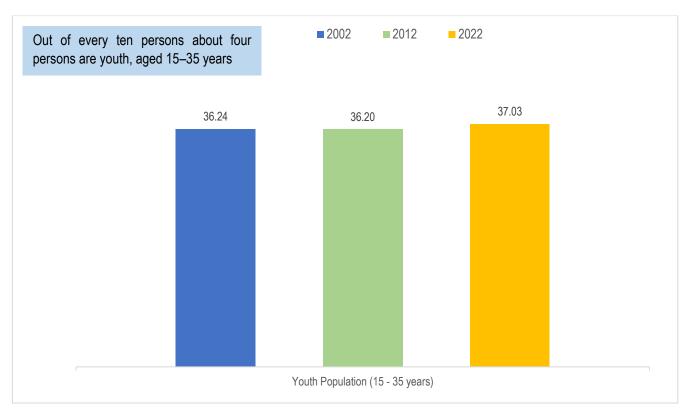

Figure 3. 5: Percentage Distribution of Youth Population (15 - 35 years); Tanzania Zanzibar; 2002 - 2022 PHC

Figure 3.6 shows that the proportion of persons aged 15 - 35 years was higher in Mjini Magharibi (39.6 percent) than other regions, followed by Kusini Unguja with 38.9 percent . The lowest proportion was recorded in Kaskazini Pemba Region (31.2 percent).

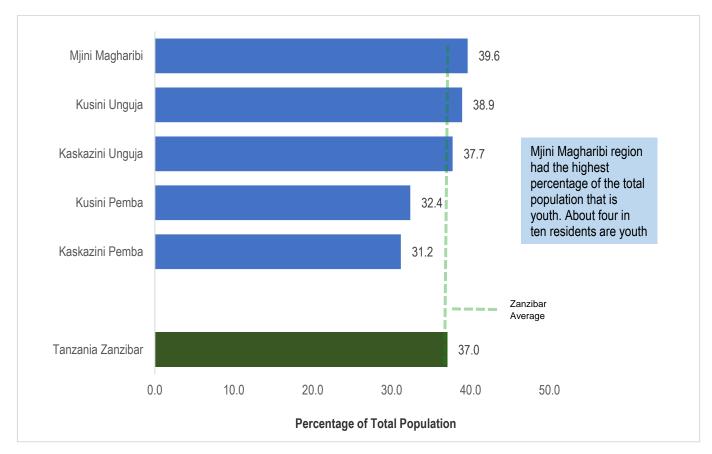

Figure 3. 6: Percentage Distribution of Youth Population (15 - 35 years) by Region; Tanzania Zanzibar; 2022 PHC

(b) International Definition

According to the international definition, youths are all persons aged 15 to 24 years. The youth represent an important stage of the life cycle, both demographically and socially. The results show that, the proportion of youth to total population in Tanzania Zanzibar, has slightly increased from 20.3 percent in 2012 to 20.4 percent in 2022 (Figure 3.7).

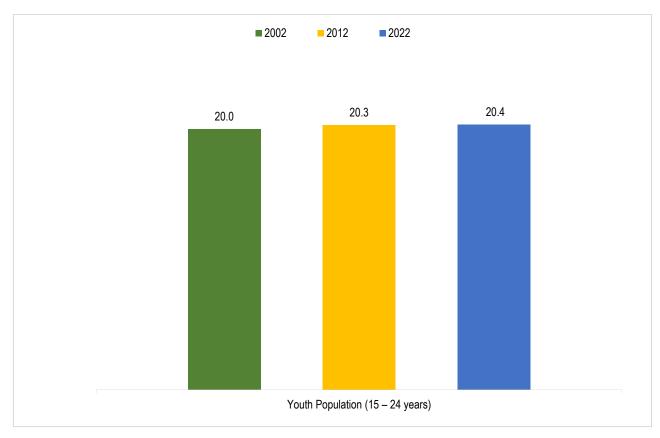

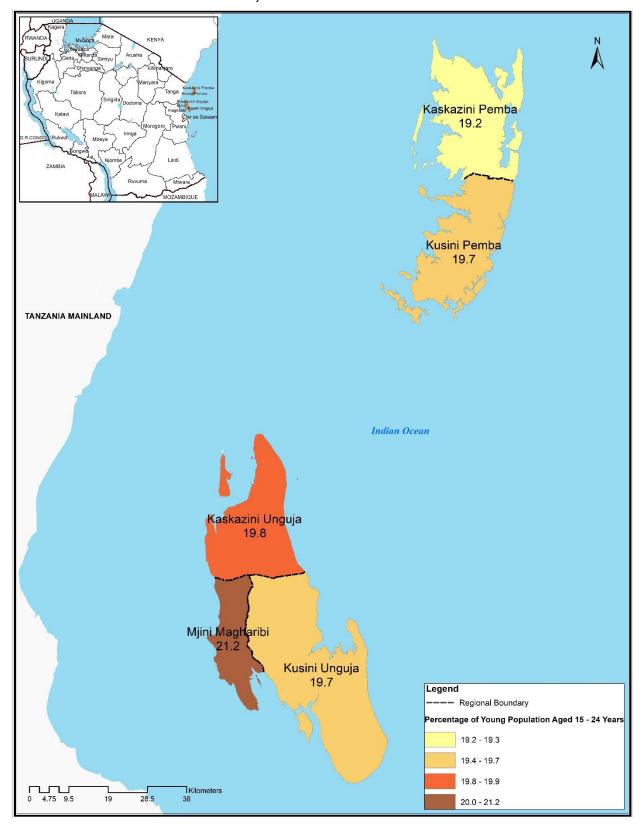

Figure 3. 7: Percentage Distribution of Youth Population (15 - 24 years); Tanzania Zanzibar; 2002, 2012 and 2022 PHC

Map 3.2 shows that, the percentage of youth population (15-24 years) varies across regions, the highest being in Mjini Magharibi with 21.2 percent, followed by Kaskazini Unguja19.8 percent, while the lowest was in Kaskazini Pemba Region with 19.2 percent.

Map 3. 2: Percentage Distribution of Youth Population (15 - 24 years) by Region; Tanzania Zanzibar; 2022 PHC

3.3 Working Age Population (15 - 64 Years)

The percentage of the working age population for Tanzania Zanzibar was 56.3 compared with 54.7 percent recorded in 2012 PHC (Figure 3.7).

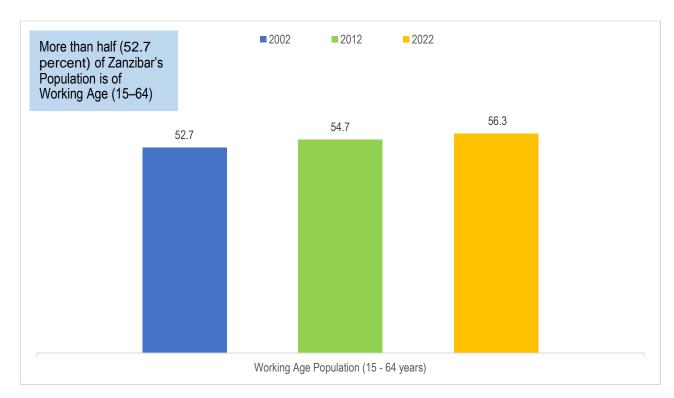

Figure 3. 8: Percentage Distribution of Working Age Population (15 - 64 years); Tanzania Zanzibar; 2002-2022 PHC

Figure 3.8 shows that among regions, the proportion of the regional population that is in the working age population (15 - 64 years) ranges from 48.8 percent in Kaskazini Pemba to 59.7 percent in Kusini Unguja. Results show that out of five regions, three regions have higher proportion of working age population than the Tanzania Zanzibar average (56.3 percent).

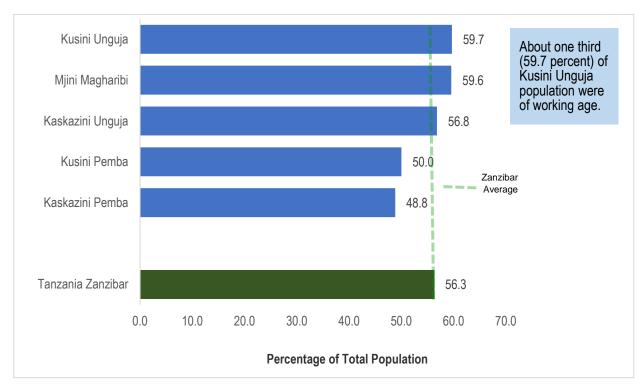

Figure 3. 9: Percentage Distribution of Working Age Population (15 - 64 years) by Region; Tanzania Zanzibar; 2022 PHC

3.3.1 Working Age Population by Sex

Among male population, the percentage in working age group (15-64 years) increased from 53.0 percent in 2012 to 55.1 percent in 2022 census. On other hand, female population of the same age group, has increased from 56.2 percent to 57.4 percent over the same period (Figure 3.9).

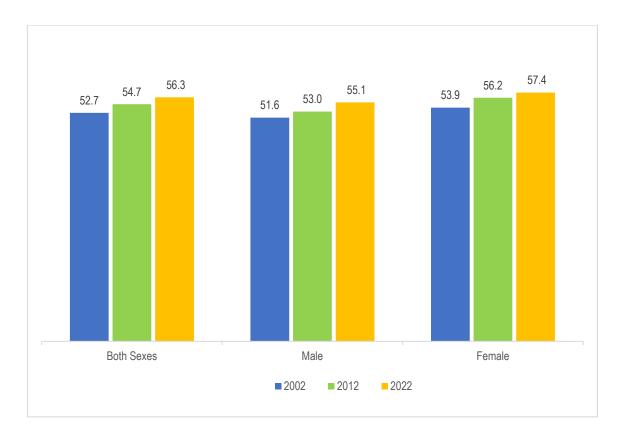

Figure 3. 10: Percentage Distribution of Working Age Population (15 - 64 years) by Sex; Tanzania Zanzibar; 2002 – 2022 PHC

3.4 Elderly Population

Internationally, all persons aged 65 years and above are considered to be elderly whereas in Tanzania, the elderly population refers to all persons aged 60 years and above. Whatever the case, the percentage of the total population that constitutes the elderly (age 60 and above; or age 65 and above) is an indicator of ageing population.

3.4.1 Population Aged 60 Years and Above

Results show that, the elderly constitute a minor portion of Tanzania Zanzibar population. Proportion of population aged 60 years and above in Tanzania Zanzibar was 4.5 percent. The proportion of the elderly in Tanzania Zanzibar remained the same at about 5 percent in the three censuses (Figure 3.10).

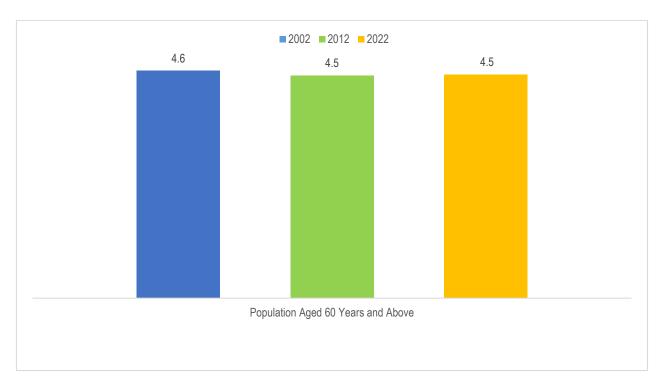

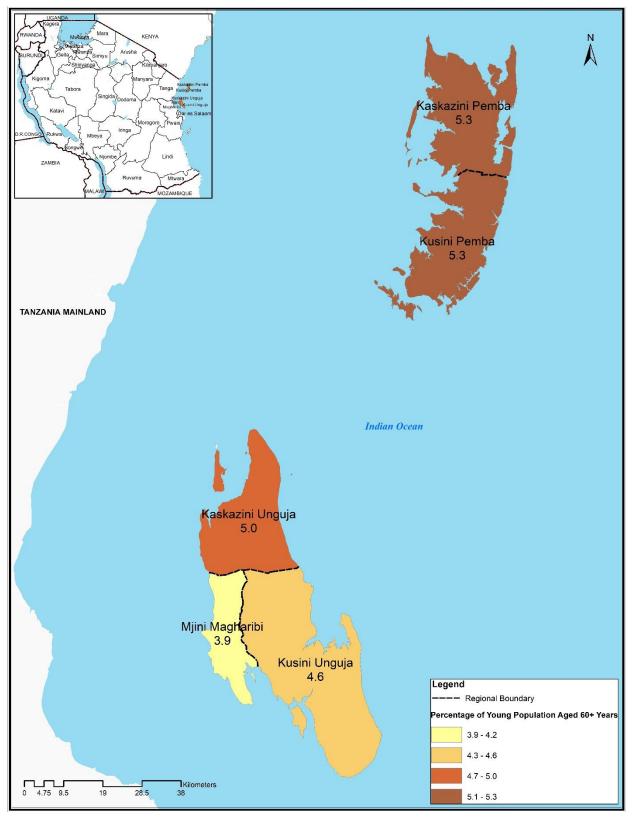

Figure 3. 11: Percentage Distribution of Population Aged 60 Years and Above; Tanzania Zanzibar; 2002 - 2022 PHC

The proportion of population aged 60 years and above varies among regions. Kaskazini Pemba and Kusini Pemba Regions had the highest proportion (5.3 percent each), followed by Kaskazini Unguja (5.0 percent). On the other hand, Mjini Magharibi had the lowest proportion of elderly population (3.9 percent) as seen in Map 3.3.

Map 3. 3: Percentage Distribution of Population Aged 60 Years and Above by Region; Tanzania Zanzibar; 2022 PHC

3.4.2 Population Aged 65 Years and Above

Figure 3.11 reveals that 2.9 percent of Tanzania Zanzibar population is aged 65 years and above. The highest proportion was observed in Kilimanjaro Region (7.3 percent), followed by Mtwara Region (6.4 percent) while Katavi had the lowest percentage of the elderly (2.3 percent), followed by Dar es Salaam, Mjini Magharibi and Geita with 2.4 percent each.

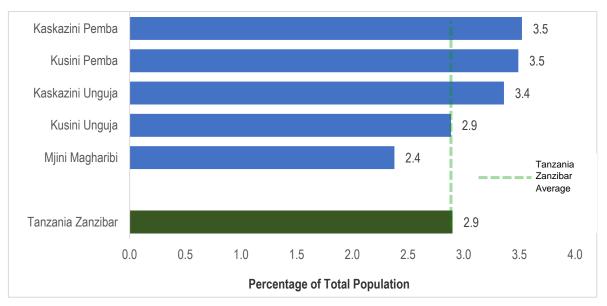

Figure 3.11: Percentage Distribution of Population Aged 65 Years and Above by Region; Tanzania Zanzibar; 2022 PHC

Key Message Box 2:

Three regions have recorded proportions of elderly population above that of Zanzibar average (2.9 percent). This is likely due to out migration of young population and/or in migration of elderly population. Proportional of elderly in developing countries is different to that of developed countries with the later being much lower the other.

3.4.3 Population Aged 65 Years and Above by Sex

Figure 3.12 reveals that3.0 percent of the total population of Tanzania Zanzibar aged 65 years and above. The same percentage was observed to males and females (3.0 percent each). Results show that female population increased from 2.8 percent in 2012 to 3.0 percent in 2022 while the proportion for male decreased from 2.9 to 2.7 percent over the same period.

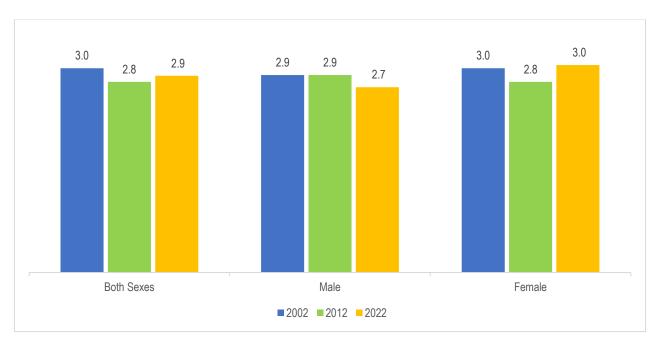

Figure 3.12: Percentage Distribution of Population Aged 65 Years and Above by Region by Sex; Tanzania Zanzibar; 2002 – 2022 PHC

Key Message Box 3:

Proportion of female elderly population aged 65 and above is higher compared to males in 2022. This is due to high death rate among males which is likely caused by high risk related behaviour and occupations. Various literatures highlight that, female live more years than males due to various reasons.

3.5 Age-Dependency Ratio

Age-dependency ratio is the ratio of persons in the "dependant" ages (those under the age of 15 years and the age of 65 years and above) to the "working age population" (15-64 years). It is expressed as a number of dependants per 100 persons of the working age population. Ratios higher than 100 are undesirable. The age-dependency ratio is a proxy indicator of the economic burden and responsibility borne by the working age population.

According to the 2022 PHC results, the dependency ratio for Tanzania Zanzibar was 77.7, that means there were 77 dependants per 100 non dependants. Results further show, age

dependency ratio in Tanzania Zanzibar has declined in three decades from 2002 to 2022 censuses. For instance, age-dependency ratio decreased from 92.0 in 2002 to 77.7 in 2022 (Figure 3.13).

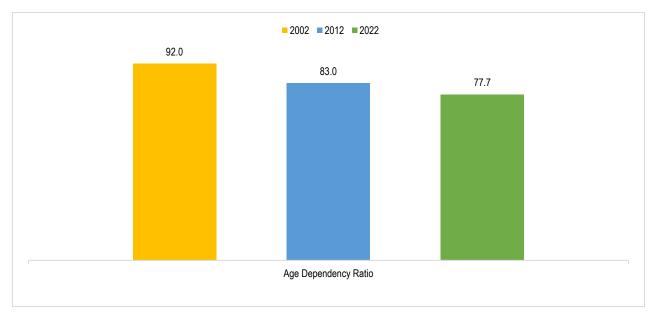

Figure 3.13: Age Dependency Ratio; Tanzania Zanzibar; 2002 to 2022 PHC

Key Message Box 4:

The decrease of age dependency ratio is associated with higher proportionate increase of working age population (15-64 years) compared to age dependent population. Age dependency ratio is a proxy indicator of economic burden.

3.5.1 Age Dependency Ratio by Region

Variations in age-dependency ratios among the regions was observed (Figure 3.14). The ratio was highest in Kaskazini Pemba (104.8), followed by Kusini Pemba(100), while Kusini Unguja Regions had the lowest dependency ratio of 67.6.

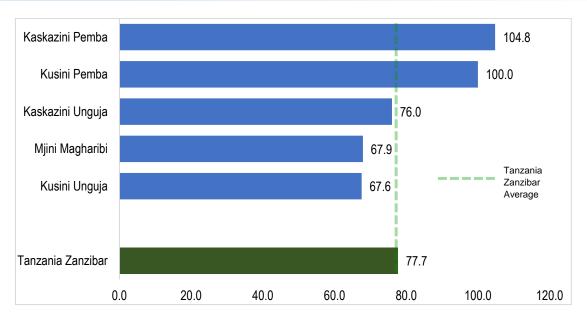

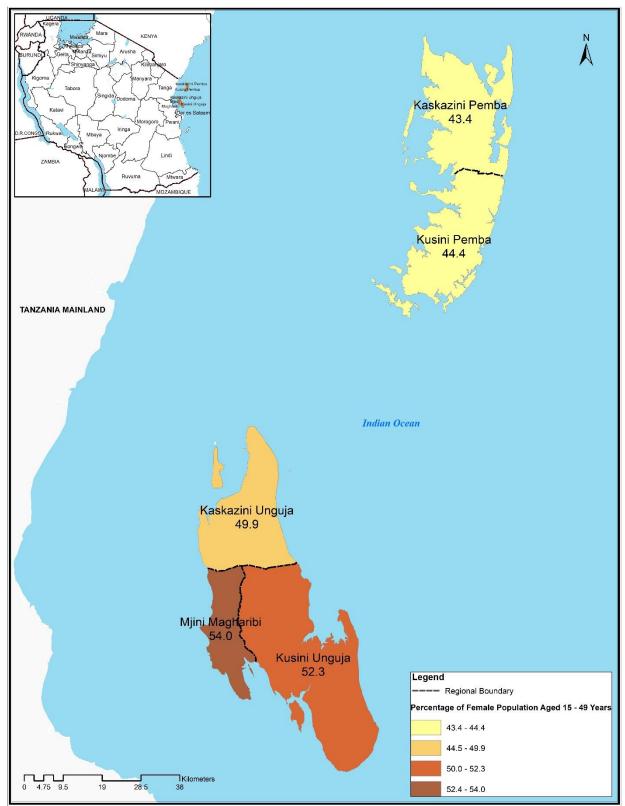

Figure 3.14: Age Dependency Ratio by Region; Tanzania Zanzibar; 2022 PHC

3.6 Females of Reproductive Age (15 - 49 years)

Females aged 15 - 49 form a special group of the population due to their role in reproduction. Nearly half of the female population (50.4 percent) in Tanzania Zanzibar is in the Reproductive Age (15 - 49 years). Mjini Magharibi Region had the highest proportion of women of childbearing age (54.0percent), followed by Kusini Unguja Region (52.3 percent). Regions with lowest proportion of women of reproductive age was Kaskazini Pemba (43.4 percent) (Map 3.4).

Map 3. 4: Percentage Distribution of Females of Reproductive Age (15 - 49 years) by Region; Tanzania Zanzibar; 2022 PHC

3.7 Population Distribution by Place of Residence

About half of Tanzania Zanzibar resides in urban areas (49 percent) and 51 percent in rural areas. (Figure 3.15).

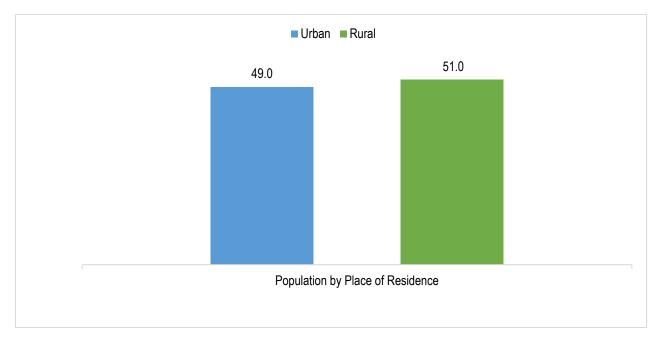

Figure 3.15: Percentage Distribution of Population by Place of Residence; Tanzania Zanzibar; 2022 PHC

Table 3.4 presents the distribution of population by rural-urban and five-year age groups. The proportion of young population (below age 15) in rural areas was higher (43.8 percent) than that of urban areas (36.8 percent). On the other hand, the proportion of youth population (15 - 24 years) in urban areas was higher (21.4 percent) than in rural areas (19.3 percent) as shown in table 3.4.

Table 3. 2: Population Distribution by Five-year Age Groups and Place of Residence; Tanzania Zanzibar; 2022 PHC

Age Group		Total		Rural		Urban
	Number	Percent	Number	Percent	Number	Percent
Total	1,889,773	100.0	963,498	100.0	926,275	100.0
0 - 4	276,739	14.6	150,071	15.6	126,668	13.7

80 - 84	4,802	0.3	2,669	0.3	2,133	0.2
85+	5,217	0.3	3,178	0.3	2,039	0.2

3.7.1 Population Living in Urban Areas

The proportion of the population living in urban areas increased by five percent during the intercensal period. Figure 3.16 reveals that, population living in urban areas has increased significantly from 39.6 percent in 2002 to 49.0 percent in 2022 for the Tanzania Zanzibar.

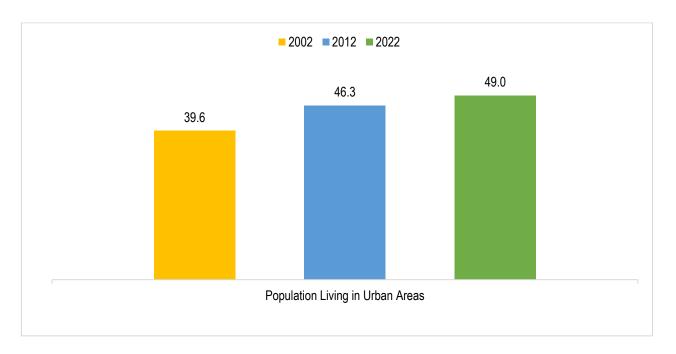

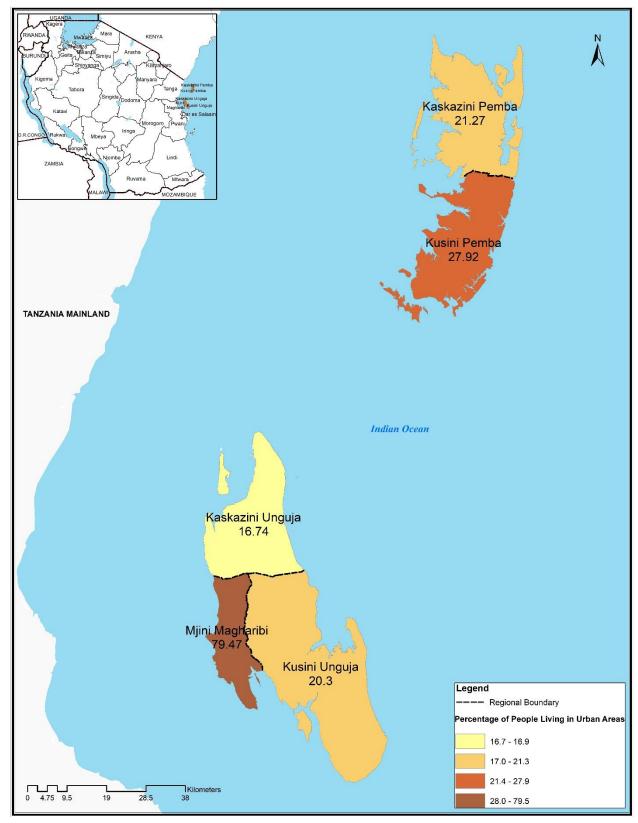

Figure 3.16: Percentage Distribution of Population Living in Urban Areas; Tanzania Zanzibar; 2002 - 2022 PHC

Key Message Box 5:

Increasing proportion of urban population is due to rural-urban migration and recategorization of rural areas into urban.

The results further reveal that, Mjini Magharibi has the highest proportion (79.5 percent) of persons residing in urban areas. On the other hand, Kaskazini Unguja Region has the lowest percentage (16.7 percent) of people living in urban areas (Map 3.5).

Map 3. 5: Percentage Distribution of Population Living in Urban Areas by Region; Tanzania Zanzibar; 2022 PHC

3.8 Key Findings and Policy Implications

The 2022 PHC provides baseline population and housing data which are crucial for policy formulation and updating, monitoring and evaluation of development frameworks at national, regional and international levels. It is rational to explicitly indicate the key findings on age and sex distribution and its policy implications.

Key Findings and Policy Implications

a) Results show that, about half of total population (47.2 percent) is below 18 years of age.

Policy implication: High proportion of young population leads to increased demand for social and economic services and thus exerting pressure in social support needs from government in the area of health, social security and education which are mostly used by the youngest in the population.

b) Census results indicate that, the proportion of population aged 60 years and above has remained at about 4.5 percent since 2002 in Tanzania. However, elderly population has increased from 45,437 in 2002 to 85,518 in 2022.

Policy implication: The increased number of elderly people indicates need for higher demand of social protection which includes universal pension and health insurance. Thus, there is a need for Government to review and implement the existing policy to reflect the existing needs.

c) Results show that there is high age dependency ratio of 78 dependents out of 100 working age group (age 15-64) which is associated with high proportion of young population aged 0-14 years.

Policy implication: High age dependency ratio is a result of high fertility rate, thus there is a need to review and implement Population Policy (2006), and strengthening implementation of family planning programs in particular.

d) Results show that the population living in urban areas has increased from about 30 percent to 35 percent during the period of 2012 to 2022.

Policy implication: The increase of population living in urban areas reflects the high demand of socio economic needs in those areas. Thus the Government is required to allocate adequate resources to improve urban planning, infrastructure development, security and environment.

Section Four

Age and Sex Statistical Tables

The Section presents population distribution by age (in single years and five years age groups) and sex for Tanzania Zanzibar by Place of Residence. The same tables are presented for regions and councils.

Table 01.	0: Kaskazini Un	guja Regio	n: Populatio	on Distribution b	y Age, Sex	and Place	of Residence; 2022 PHC

Annex: List of Contributors

Contributors to the Age and Sex Distribution Report

Census Commissars

Hon. Anne Semamba Makinda (Tanzania Mainland)

Amb. Mohamed Haji Hamza (Tanzania Zanzibar)

NBS/OCGS Board Chairpersons

Dr. Amina Msengwa (NBS)

Amb. Amina Salum Ali (OCGS)

NBS/OCGS Government Statistician

Dr. Albina Chuwa - Statistician General, NBS

Salum Kassim Ali – Chief Government Statistician, OCGS

NBS and OCGS Directors

Ruth Minja (NBS) Fahima Mohamed Issa (OCGS)

Emilian Karugendo (NBS) Bakari Kitwana Makame (OCGS)

Daniel Masolwa (NBS) Haroub Ali Masoud (OCGS)

Daniel Ulindula Andrew (NBS) Abdalla Khamis Abdalla (OCGS)

Census Coordinator

Seif Kuchengo – National Census Coordinator

Abdul-Majid Jecha Ramadhan – Zanzibar Census Coordinator

Authors/Reviewers

Aldegunda Komba Ramadhan Othman (NBS)

Dr. Mwinyi Mwinyi (NBS) Boniface Simpoli (NBS)

Mariam Kitembe (NBS) David Mwaipopo (NBS)

Phausta Ntigiti (NBS) Hassan Jamal Hassan (OCGS)

Veronica Mwangoka (NBS) Hilali Abdullah (NBS)

Said Mohamed Said (OCGS) Henrick R. Mwellu (NBS)

Novat T. Buberwa (NBS) Pastory Ulimali (NBS)

Asia Hassan Mussa (OCGS) Philbert G. Mrema (NBS)

Deogratius Malamsha (NBS) Amina Musa Khamis

Mdoka Omar (NBS) Bakari Khamis Kondo

Hellen Hillary (NBS) Kazija Khamis Said (OCGS)

Zawadi Biki (NBS) Hashim Njowele (NBS)

Saidi K. Mnenge (TAMISEMI) Zawadi Biki (NBS)

Livini Avith Morrice (NEC) Richard Bakubiye (TAMISEMI)

George Joseph Miringay (TAMISEMI)

Spatial Data Analysts

Benedict Mugambi (NBS) Khalid Lewanga (NBS)

Mohammed S. Gharib (OCGS) Julieth Msuya (NBS)

Yunis Nota (NBS) Nassir H. Salum (OCGS)

Data Processing

Mwanaidi Mahiza (NBS) Stephen S. Jutta (NBS)

Hashim Uzia Mohamed Novat T. Buberwa (NBS)

Steven Lwendo (NBS) Munir Mdee (NBS)

Bakar K. Omar George Mockray

Beatrice Rwegoshora (NBS) Emmanuel K. Chanya

Masele Mabula Vicent Kaberengeta (NBS)

Editorial Team

Mr. Cletus Mkai Prof. Hijja Mwatawala

(Retired Director General, NBS) (Institute of Rural Development Planning)

Prof. Maurice Mbago Dr. Joyce Peters Chonjo (University of Dar es Salaam) (Demographer/Economist)

Prof. Milline Mbonile Ahmed Mohamed Makbel

(University of Dar es Salaam) (Statistician/Demographer)

Prof. Esther Ndungumaro Irenius Joseph Ruyobya

(Mkwawa University College of Education) (Statistician/Demographer)
